

Shadow Dash MS for Android

[Register](#)

[Add to Cart](#)

Once again MegaSquirt tuning software stands in front of competitors. All new Shadow Dash MS provides not only mobile logging via your Android phone or tablet, but now the dashboards you have appreciated with TunerStudio have been brought to your Android phone or tablet as well. Actually TunerStudio dashboards with additional support for images in indicators and gauges. (Yes that is coming to TunerStudio too)

Released for Final Round Beta Testing, Android dashboards and data logging with style.

- TunerStudio Dashboard Style and flexibility
- Shadow Logger simplicity
- Runs on you Android Phone or Tablet
- MSL format data logging
- Save & load with normal msq tune files
- Support for all MegaSquirt Firmwares
- Slide between 4 Dashboards that are open at all times
- Android Sensor data (GPS, Accelerometer, Magnetic, etc)
- HUD Mode
- Support for Android 2.3 and up.

Installation

Enable Unknown Sources

Before attempting a manual installation of apps using the .apk files, you must first allow your phone to install from “*Unknown Sources*” (i.e. non-Play apps).

To do this, navigate to *Settings* -> *Security* and check the box marked “*Unknown Sources*”.

You can then run the .apk file from any file manager and you will have the Shadow Logger MS icon available with your applications.
